HYDRODRY E-Z VENT™
CASING BEAD
FOR STUCCO AND PLASTER INSTALLATIONS

E-Z Vent is a vinyl HI-PERFORMANCE trim that allows the top of a wall to properly vent and release unwanted water vapor from within the wall cavity through a series of venting slots. AMICO’s exclusive diverter design prevents water or driving rain from entering the wall cavity. A unique flexible bulb provides a flawless caulk joint to the soffit while the applied bond breaker tape allows for two point adhesion ensuring long term health of the sealant joint. An integrated ground provides a guide to allow for the proper stucco thickness.

HYDRODRY AMIFLOW
DRAIN SCREED

FOR STUCCO AND PLASTER INSTALLATIONS

HYDRODRY DRAIN SCREED is a vinyl HI-PERFORMANCE trim that provides a straight, true, continuous surface that terminates the base of a stucco wall. DRAIN SCREED integrates many features to simplify installation providing guides to help installers maintain the proper stucco thickness. The key feature is the vented moisture trough that provides the drainage path for water in the wall cavity. The Drain Screed features a vented drainage trough, which allows Rain Screen to properly terminate, ensuring moisture can drain out of the bottom of the wall. As a replacement for the traditional foundation weep screed, the HYDRODRY Drain Screed also provides a provide a straight, true, continuous surface that will drain and ventilate the wall cavity.

This trim is required by most building codes in the United States. Check with local building codes for the proper clearance for the weep screed placement above grade.

All butt joints, intersections, and ends should be joined, embedded and sealed in a quality sealant compatible with exterior paint finish.

HYDRODRY MID-WALL WEEP SCREED

FOR STUCCO AND PLASTER INSTALLATIONS

AMIFLOW Mid-Wall Drain Screed has integrated drain slots to allow water and excess moisture to escape from the back of a stucco membrane. This screed also performs as an expansion (control) joint with multiple grounds. It is typically installed where a framed stucco surface meets a masonry (concrete block) stucco surface. This condition is common between floors on 2-story homes and at the base of a gable receiving stucco.

The flange features pre-punch attachment holes every 4" for easy installation. The 3-1/2 nailing flange also offers plenty surface area to tie the trim into the weather plane of the wall. The weather barrier, drain screen and lath should be installed over the solid upper flange to direct water to the foundation weep screed. The profile is manufactured with a 3½" nailing flange as required by code.

All butt joints, intersections, and ends should be joined, embedded and sealed in a quality sealant compatible with exterior paint finish.

HYDRODRY AMIFLOW UD

FOR STUCCO AND PLASTER INSTALLATIONS

AMIFLOW UD is a vinyl HI-PERFORMANCE trim profile that provides drainage for sill stones, roof pitches, and base of wall applications. The UD features drainage trough for proper Rain Screen Termination and an integrated ground for the proper stucco thickness. The key feature is the vented moisture trough which allows rain screen to be inserted to maintain the drain-age cavity throughout the wall.

All butt joints, intersections, and ends should be joined, embedded and sealed in a quality sealant compatible with exterior paint finish.

This bead is required by most building codes in the United States. Check with local building codes for the proper clearance for the weep screed placement above grade.
